

# Review required

US Core Server v6.1.0 · US Core FHIR API · Test Kit 1.1.5  
Report FP-INFERNO-7603FBBD · Run 7603fbbd-839b-4982-95ab-fd895a8c8355

RECORDED DECISION

## Review required

This is a real official Inferno execution against a public synthetic reference server. Failed and skipped checks are not hidden.

PUBLIC SAMPLE

## No customer data

No customer credentials, endpoint data or PHI are included. This report is not certification.

### 03 / LIMITATIONS

01. This is a public synthetic reference run, not a customer result and not evidence about any production system.
02. The selected scope is the complete US Core FHIR API group. Optional SMART launch groups, EHR launch, granular-scope suites and certification workflows are outside this recorded run.
03. Skipped tests remain visible and are not counted as passes. They commonly mean a prerequisite value or suitable synthetic resource was not observed.
04. A passed Inferno result applies only to the pinned test-kit version, selected group, endpoint state and execution time recorded here.
05. FHIR Pilot is an engineering-readiness aid, not certification, a penetration test, legal advice or regulatory approval.

# All official Inferno test results

Every result from the selected group is listed. Inputs, access tokens and synthetic patient identifiers are excluded.

| #  | RESULT | TEST IDENTIFIER                                                                                                                          | MESSAGE (REQUEST EVIDENCE)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
